Summary

Entry-level Data Analyst with a strong foundation in SQL, Python, Excel, and Power BI, demonstrated through academic and project work. Hands-on experience in data cleaning, exploratory data analysis, dashboard reporting, and supporting business decisions through data-driven insights. Familiar with basic machine learning workflows and text-based analysis as part of project work.

Skills

Data Analysis: Data cleaning, data validation, exploratory data analysis (EDA), KPI tracking, trend analysis, correlation analysis, statistical analysis, feature engineering

SQL and Databases: SQL queries, joins, subqueries, aggregations, GROUP BY, filtering, relational databases

Programming and Analytics: Python, Pandas, NumPy, data preprocessing, basic text analysis

Excel: Formulas, pivot tables, charts, data cleaning, VLOOKUP, XLOOKUP

Visualisation and Reporting: Power BI, dashboards, Power Query, DAX, reporting and insights

Other Tools: Git, GitHub, Jupyter Notebook, basic ML model building (Scikit-learn, CatBoost)

Project Experience

Music Streaming Platform Analytics — User Behaviour and Sentiment Analysis *Python, Power BI, SQL*

- Collected 1,000 Google Play Store reviews across 5 platforms and survey responses from 17 questions; cleaned and preprocessed data for analysis.
- Applied text-based sentiment analysis (VADER) and clustering techniques to classify reviews into 7 business topic categories and identify key user pain points.
- Engineered features from survey data including engagement score and churn risk indicators; delivered insights via a 3-page Power BI dashboard covering user behaviour and premium adoption.

Flood Prediction and Early Warning System

Python, Scikit-learn, Flask

- Prepared a synthetic environmental dataset simulating flood conditions; performed EDA to identify correlations between rainfall, water level, soil moisture, and flood risk.
- Built and evaluated a multi-class classification model (High / Moderate / No-Risk) achieving 95.5% accuracy; selected CatBoost for its handling of categorical seasonal features.
- Deployed the model as a simple Flask web application with an HTML interface for real-time flood risk prediction from environmental inputs.

Chinook Music Store — Revenue and Customer Analytics

SQL, Power BI, DAX

- Analysed 11 relational tables using SQL joins, subqueries, and aggregations to extract revenue trends, top-performing tracks, and repeat purchase behaviour across multiple markets.
- Calculated customer lifetime value (CLV) and identified high-value customer segments to support targeted marketing strategy.
- Built a Power BI dashboard with custom DAX measures tracking 6 KPIs including revenue by region, sales agent performance, and genre popularity trends.

Education

Master of Computer Applications (MCA)

KL University, Vijayawada

April 2026

CGPA: **9.23**

Bachelor of Science in Mathematics, Statistics and Computer Science (MSCS)

KBN College, Vijayawada

2024

CGPA: **7.32**
